

# GCSE Biology “A flying start”

The following pages give you a brief look at some of the work you will be covering in GCSE Biology.

## Getting and staying organised

The key to level 2 success is good organisation; keeping your notes in good order and keeping track of progress through the course is essential.

Get yourself a large folder (just for Biology) with a set of dividers and file your notes at the end of each short section. You will also need to get a smaller folder for transporting notes to and from college, and for keeping your current notes in.

**Bring paper, a pencil, calculator and pens to every lesson.**

You will buy a textbook and a workbook which supports your GCSE Biology course which you should also bring in to every lesson.

## Preparation and reading ahead

You should do regular background reading (from the textbook and online resources) and keep up to date with the workbook, particularly important if you miss a lesson for some reason.

## Homework

You will be set homework each week, generally written homework, and mostly from your workbook.

## GCSE Biology Online

You can access the GCSE Biology intranet from college and from home if you are connected to the web via the Varndean College Moodle page.

All the vital information about your course is there i.e. specifications, numerous powerpoints/additional learning resources activities and specimen exam papers for revision purposes. You should become familiar with it as soon as possible and it will become a valuable resource and support to your work throughout your time at college.

The following pages should refresh your general biology skills and set you off on the right track.

Have a go. You may well find some of it difficult but persevere or see if you can work with someone.

## GCSE Biology – Flying Start

1. **Figure 1** shows cells containing and surrounded by oxygen molecules. Oxygen can move into cells or out of cells.

**Figure 1**

- 1.1 Into which cell, **A**, **B**, **C** or **D**, will oxygen move the fastest?

[1 mark]

**A**

**B**

**C**

**D**

1.2 Use words from the box to complete the sentences.

[2 marks]

<b>active transport</b>	<b>diffusion</b>	<b>membranes</b>
<b>mitochondria</b>	<b>nuclei</b>	<b>osmosis</b>

Oxygen is taken into cells by the process of \_\_\_\_\_ .

The parts of cells that use the most oxygen are \_\_\_\_\_ .

1.3 Which process produces oxygen in some cells?

Tick **one** box.

[1 mark]

- Diffusion**
- Photosynthesis**
- Protein synthesis**
- Respiration**

2. Some scientists investigated the rates of absorption of different sugars by the small intestine.

In one experiment they used a piece of normal intestine.

In a second experiment they used a piece of intestine poisoned by cyanide.

Cyanide is poisonous because it prevents respiration.

**Table 2** shows their results.

**Table 2**

<b>Sugar</b>	<b>Relative rates of absorption</b>	
	<b>Normal intestine</b>	<b>Intestine poisoned by cyanide</b>
Glucose	1.00	0.33
Galactose	1.10	0.53
Xylose	0.30	0.31
Arabinose	0.29	0.29

2.1 Name **two** sugars from **Table 2** which can be absorbed by active transport.

[2 marks]

---

---

2.2 Use evidence from **Table 2** to explain why you chose these sugars.

[4 marks]

---

---

---

---

---

---

2.3 All of the sugars named **Table X** can be absorbed by diffusion.

Explain how information from **Table X** provides evidence for this.

[2 marks]

---

---

---

---

3. The leaves of most plants have stomata.

3.1 Name the cells which control the size of the stomata.

[1 mark]

---

3.2 Give **one** function of stomata.

[1 mark]

---

3.3 **Figure 5** shows part of the surface of a leaf.

**Figure 5**

The length and width of this piece of leaf surface are both 0.1 mm.

Calculate the number of stomata per  $\text{mm}^2$  of this leaf surface.

[2 marks]

Number of stomata per  $\text{mm}^2$  = \_\_\_\_\_

3.4 A different plant species has 400 stomata per  $\text{mm}^2$  of leaf surface.

Having a large number of stomata per  $\text{mm}^2$  of leaf surface can be a disadvantage to a plant.

Give **one** disadvantage.

[1 mark]

---

**3.5** A student investigated the loss of water from plant leaves.

The student did the following:

Step 1: took ten leaves from a plant

Step 2: weighed all ten leaves

Step 3: hung the leaves up in a classroom for 4 days

Step 4: weighed all ten leaves again

Step 5: calculated the mass of water lost by the leaves

Step 6: repeated steps **1** to **5** with grease spread on the upper surfaces of the leaves

Step 7: repeated steps **1** to **5** with grease spread on both the upper and lower surfaces of the leaves.

All the leaves were taken from the same type of plant.

**Table 2** shows the student's results.

**Table 2**

Treatment of leaves	Mass of water the leaves lost in g
No grease was used on the leaves	0.98
Grease on upper surfaces of the leaves	0.86
Grease on upper and lower surfaces of the leaves	0.01

What mass of water was lost in 4 days through the upper surfaces of the leaves?

[1 mark]

---

**3.6** Very little water was lost when the lower surfaces of the leaves were covered in grease.

Explain why.

[3 marks]

---

---

---

---

4. Some forms of the Human Papilloma Virus (HPV) have been shown to cause cervical cancer.

Girls aged 11 to 14 now receive a vaccine for HPV.

Explain how the HPV vaccine could reduce the incidence of cancer.

Include in your answer:

- How the immune system responds to vaccines
- How giving girls the vaccine could reduce the number who get cervical cancer.

[6 marks]

---

---

---

---

---

---

---

5. **Figure 1** shows a cell from the small intestine.

**Figure 1**

- 5.1 Which part of the cell contains chromosomes?

Choose **one** part from the list.

[1 mark]

Cell membrane      Cytoplasm      Nucleus      Mitochondria

**5.2** Chromosomes contain many genes. Genes have different forms.

What is the name given to different forms of a gene?

[1 mark]

**5.3** Eye colour is controlled by genes.

In a genetic diagram:

- B = brown
- b = blue

The genotype of one individual is bb.

Which words can be used to describe the genotype of this person?

Choose **two** words from the list.

[2 marks]

**Dominant      Heterozygous      Homozygous      Recessive**  
**Phenotype**

**5.4** Tobacco plants have 48 chromosomes.

State how many chromosomes do tobacco plant pollen cells have.

[1 mark]

**6.** Mitosis and meiosis are types of cell division.

**6.1** For each feature in the table, tick (✓) **one** box to show if the feature occurs:

- only in mitosis
- only in meiosis.

[2 marks]

Feature	Only in mitosis (✓)	Only in meiosis (✓)
Produces new cells during growth and repair		
Produces gametes (sex cells)		
Produces genetically identical cells		

**6.2** Name the organ that produces gametes (sex cells) in:

**[2 marks]**

A man \_\_\_\_\_

A woman \_\_\_\_\_

**6.3** **X** and **Y** chromosomes are the sex chromosomes. They determine a person's sex.

What sex chromosomes will be found in the body cells of a woman?

**[1 mark]**

\_\_\_\_\_

**6.4** A man and a woman decide to have a child.  
What is the chance that the child will be a boy?

**[1 mark]**

---

<b>Total Mark</b>	<b>Percentage (%)</b>	<b>Grade</b>
